

How to Make a Soda Pop Tab Bracelet (<http://www.instructables.com/id/Pop-Tab-Bracelets/>)

Step 1: Gather your supplies: For starters, you need a pile of pop tabs. Somewhere between 20-30, depending on wrist size. You also need elastic cord and scissors. That's it! No other supplies necessary.

Step 2: Start assembling: Cut cord to approximately 2-1/2 feet. Loop through the first tab, situating the tab at center of cord.

Step 3: Another tab: Hold another tab below your first tab, (make sure your rough edges are always facing each other, smooth side to the outside) overlapping so you can see through openings of both tabs. Thread the cord up from the bottom through both tabs, bringing top cord through top hole and bottom cord through bottom hole.

Step 4: And another tab: OK, now get another tab and hold it on top, overlapping as before, and this time, thread the cords through the opposite holes forming an X on top.

Step 5: Keep going: Another tab, held at the back and thread those cords through, top cord-top hole, bottom cord-bottom hole.

Step 6: Don't give up: Another tab, held on top, thread cords through forming that X. Top cord-bottom hole, bottom cord-top hole.

Step 7: Almost done: Keep going, repeating step five and step six, alternately, until bracelet can be wrapped around your wrist and ends meet comfortably. You need the last tab to be one placed at the back side. Then, bring ends together and form final X.

Step 8: It's finally done! Tie the cords in a knot and trim the ends.

Step 9: Masterpiece! Turn bracelet back over and slide it on your wrist. There should be just enough stretch to easily go over your hand and then be lightly snug on your wrist.
